Fruit Ridge Notes - Row Crops - Monday - May 13 - 2019

Greetings From Cool & Cloudy Fruit Ridge Ave.... Prayin for Sunshine here

Really need for Things to Dry Out a Bit

****** Many of our Grain-Grower-Faves** are doing some Disease-Control Applns in their Wheat right now....

Mildew is one of the main concerns ...

Lots of Propiconazole and Tebuconazole [Sterol Inhibitors] and CS2**005** goin out of the Door

Some are Tank-Mixing those S.I.s at 4 oz - Ac - Each with the Systemic "**005**" at 1 Pint - Acre.

And

One Grower checked on Prosaro for using later for Fusarium which is also a Mixture of Sterol Inhibitors [S.I.], and said his own Tank-Mix with the "**005**" was less cost per acre and gave him *more A.I.*-per-acre of the Sterol Inhibitors ... a lot more plus the Systemic "**005**" ...for *less cost-per-acre*.

One Variable that I see if that one of the S.I.s in Prosaro is "Prothioconazole" ...a different molecular tweek than the Propiconazole. Both have a stellar performance record.

****** Talked with some Guys from Northern Indiana** They said nothing is gettn done there either.

Up north of us a bit, around the Fremont area, there's some sandier soils where there are 2 small fields planted to Beans.... but then they parked the Planter again.

****** Remember in Your BurnDown Applns....** to include the ORO-Agri Product... Vintre or WetCit ... Some Guys spraying a lot of acres tell me this stuff has saved them a 2nd Pass.... It actually increased the Glyphostae-Kill-Capacity on some very tough 'Resistant' Weeds-Grasses..... One Trip.

A common Use-Rate is 3 pints per 100 Gal. Tank-Mix. I think thats about \$3-per-acre if you're treating with 20 GalWaterAcre. [GWA]

****** About 3:00 Today** I noticed something resembling a Shadow.... ??? ...like as if the Sun was shining..... ???

Warm Regardsr
