Fruit Ridge Notes - Monday - May 18 - 2020

.... Hey Faves A Dreary Monday Morning **Big Wind.... Still Raining....**

ForeCasters say Rain to Continue well into Tuesday AM...

And that Wind not expected to CalmDown much til Wedn.AM...

This is another very Serious Hard to Deal with **Doozee Scab-Infection....**

This is one that will really Test your Faith in your "Two-Alt-Center-per-Week-Strategy" ...

Remember.... **History** dictates that we '*Stay-the-Course*' ...

We ++Up the Captan80WDG Rate-per-Ac-to-5 Lbs...

We ++Can leave the EBDC at 3 Lbs if we want...We can use more EBDC if we want...

We ++Know all Residual-Protectant is in the Weeds...

We ++Add 1 Qt-Ac-Systemic-CS2005 for a huge Host of Reasons...

We ++Watch the Radar and Go as soon as we can...

We ++Get a 'Center' on, and because of the massive 2-3 Inch Rain, we immediately get back thru with another Center...

We ++Buck-a-Little-Wind if need be... Realizing We have had 2- 3 Weeks where we achieved 184%-Coverage

We ++ Aren't afraid to Go when its a lite drizzle...

We ++ Always get Caught-Up with our 2-Alt-Centers-Week...and almost Never do more than those 2-Center-Week...

We ++Add in Whatever Nutrition & PGRs our Strategy calls for...

We ++Can obviously see the huge burst of New-Vulnerable-Green-Growth...

We ++Know that this is the Growth Stage when we get crazy huge dispersal of the ScabAscoSpores

We ++Really take comfort in the several earlier Apps with the Systemic-"005" in the Tank

**** **Q & A Is Your Fire-Blight-Susceptible** Beautiful Hi-Tec-Hi-Density-Huge-Investment Block maybe hosting a F.Blight-Inoculum-Strain that is "Strep-Resistant"...??? Amy says George Sundins MSU-Lab for Testing this is gonna hopefully be back up to speed in about 1 Month....Which is also about the perfect time to grab a Sample of the F.B.Trike-Symptoms.

Soooo much important stuff has been disrupted because of this crazy CVD19Crap

****** We Realize the Data...and the Serious 'Opinions'**

..... out of Cornell in 2018-19....telling us to use Kudos 27.5WDG at Pink on Honeys to prevent BitterPit, does not suggest we relax on the Calcium Program. Our Ca-Apps on Honeys are very seriously applied Weekly....and using substantial Rates... starting Now.

****** We Know Using a SAR Product** as soon as we get close to Bloom is very Smart-Money... and.... We know the only SAR Product on the Market that really delivers and cost so little, is **SAver** from Plant Food Systems. SAver helps the Plant/Tree to Resist all Diseases. Soooo Cheap.... Cant believe it I seriously recommend at least 3 Apps.

****** PleaseDo Not drop Captan** out of your Strategy in advance of a "Oil" to go in with your Abamectin 0.15EC at Petal Fall-1st Cover.... History dictates you will save a bundle and be much cleaner vs. Scab and ERMs if you do a bunch of Captan80WDG and do 4-Pint-100-Gal-InSpray-90 with your Abamectin 0.15ECinstead of any Oils. We like No Oils Ever... Zero...

Without the Captan, you're locked into a Hi-Priced-New-Product Strategy that is gonna, by Seasons-End, Cost you \$50 - \$100 - Acre more than you need to spend. Forty-Nine out of 50 Guys have proven the InSpray-90 works just as well or better than Oil with their Abamectin 0.15EC.

Have a Blessed Week
