Fruit Ridge Notes - Monday – May -3-21

Greetings Friends

WunderGround 10-Day... Chances of Rain On-Off Today--Early Tuesday...

Windier tomorrow..Wedn....and Friday afternoon...

SunShine 6 of 10 Days...

Hi-Temps all in the 50*s til early next week...then a few 60*s...

Lows....Hi 30*s...mid 40*s...

..... Gonna stay Cooler than a 30-Yr-Avg-Norm.... Bloom could take awhile..??... 😞 😞 We're Stayn outta there with Poisons and Herbicides....

Much justifiable concern for F.Blight ...Lots of Bloom all over the Place..... Really warm yesterday.... Spotty Showers.... The "'EIP"' - Epiphytic Infection Potential - on the MSU"'Fire Blight Assist Chart"' is on Red Alert

We know all the "'005"' Guys that have had their "'005-Program"' in place since 1st Green are good... We've never had a Failure... We've seen it 'right-to-the-Row'..... and nearly every day I am reminded that Lots of Guys use the "'005 Program"' very intensely.... 5 - 6 - 8 or more Applns-per-Season.... and enjoying a very much nicer smoother Fruit Finish than their neighbor that only did 1 major copper App early early.... butthey used the OlBlueSludgeBluePaintHighPriced Copper... and they can still see the BluePaint on that expensive Green Background... 😞 😞 ...and they have *zero* confidence when that "'EIP-Red-Alert"' shows up...

What All the "'005 Guys"' consider to be the 'Full-Rate' is 1 Qt. in 50 Ga.Water-Acre [GWA]

.... Small Trees...??...25 GWA...??...1 pint "'005"'-Ac...

Running some Strep with "005" in an Emergency-Response...???...like after Hail...??? 1 Pint "'005"' per-Ac...

World Renowned Researchers have witnessed the"A" "005" *plus Strep* right next to the"B" 'OlBluSludge' *plus Strep* immediately following a brutal Hail Storm.... They could see right to the Row....

Side "A" -- "005"==No FireBlight....

Side "B" -- 'OlBluSludge'==Had to *destroy* what was left of the horrific FireBlight ravaged Orchard...

Seriously Keepn our Kudos and Calcium Programs strictly in place.... and Yup.... Our Fave Calcium Products have been officially proven Not to interfere with the Kudos Efficacy... All Prohexadione Labels always told us not to do our Fave Calcium Products in the same Tank...???...not so now...Kudos knows many of you are very successfully doin the *MainStay-S.I.-Ca* with theKudos in the same Tank.

Preparing for the Late Petal Fall "*Parka-App*" More & More Guys every Year are seriously using Parka.....

They are getting much less *Flecking.. *Russet.. *Cracking... and are getting better more uniform Coloring...

They're using **1 g.Parka-per-100-Ga....** Getting excellent coverage... Doing Pesticides and Ca and Kudos all in same Tank... but without adding any Surfactants/Adjuvants to their Tank-Mix....

They're doin 3 Applns....Late Petal-Fall.... then 25 Days laterthen 25 days later... The Intervals can be 21 days to 30 days.

Please get this on your shelf....That 1st App will likely be 10 Days from Now...??.. 😞 and this is now a Low-Cost-Program @ Avg=\$18 - \$24 - per-Appln...👍👏😬

Our N.Y. Friends are in the middle of a 4th Scab Infection...

Some Faves using Fortuna[EBDC] with Teb...with SAverwith "'005'".... with their InSpray-90...but Not using the Captan right now during Bloom...??? In the past... there's been substantial evidence of some kinda rough fruit-finish when Captan is in with a 90-10-NIS like Regulaid--Activator-90--InSpray-90...during Bloom....

Keep Your SweatShirt Handy.....

Gods Peace....
