Fruit Ridge Notes  
from Ron Reister  
C.C.A.

## Fruit Ridge Notes - Wednesday - June 5 - 2019

**Greetings ..... A Small Splash of Precip Again early this Morning ....**

*Another Good MSU-Extension-Amy-Phil-7 am-SwanInn Meeting this Morning.*

### **UpDates Included....**

- Be watching this coming Weekend for any F.Blight Symptoms starting to show from May 27 Infection....
- Sparta Weather Station is Leading the Pack with 15.05 Inch-Rain-Fall since Jan.1st
- Most All Stations are right close over-or-under 1400 DegreeDays-Base-32; Standale closer to 1500
- Once we passed 1000 D.Days-B32 the Scab Spores are normally all Mature
- Most All of the Main-Most-Popular-Insect-Targets are now active.

**\*\*\*Those Sweet Cherry Trees ....**In one of our 10-Ac-Apple-Trial-Blocks look like they are shucking off to about a 40% - 50% of a Full-Crop .... The Ancient Queen Ann Sweet by our Patio looks like maybe 10% Crop.

I gotta remember ...that those Sweets in that Trial Block are gettin Only a "Apple-Spray-Trial-Products-Program" .... So I really cant expect much real-deal-quality Production. But they seem to like what we're doing... like the Weekly Dose of CS2**005** Systemic Copper Bactericide-Fungicide.... Thats the only Scab-I-Cide we are doing in that Block....Every Week....2 Alt-Centers.... still Clean.

The other 10-Ac-Trial-Block...??? Still squeaky Clean. Same Program. Five Infection Events there.

**\*\*\* Q & A .... Yes ...The Rate-per-Acre** You end up with at a **33%-TRV** on that **Parka-OxiDate 2.0** Appln ...??? ... is **42 oz.** Each-per-Ac. You are doing the 1 gal.Each Parka & OxiDate 2.0 per-100-Gal-Water.... and going slow enuf for *at least 100%* Coverage. You'll have about \$10 in the OxiDate & \$20 into the Parka.

Please pretty Please leave a serious Check-Row.... You will see a Very Happy-Pack-Out-%%-Increase-Difference.

*Happy Pack-Out--Happy Check-Book--Happy Wife--Happy Life.*

\*\*\*\* **Just Visiting with some Top-Shelf-Blues....** North of Holland ...at 70% Bloom...Doing a 1 Lb-Ac-**RxSupreme**.... They have proven to themselves this gets them a solid increase in Fruit-Set...and makes for Bigger-Better-Fruit-Size & Quality. They follow this Appln with another 1 Lb. at PetalFall.

*Whats in it....???* RxSupreme is **2-14-15[NPK] 3Zn--3Fe--2.9% Mn--1.1%Cu--.9%B--.001Moly--5%Humic--3%L-AminoAcids .....**

**So**...Anybody can do that right...???

Many...mostly all "Nutrients" are 'ReActed' right...???

'ReActed' can translate 50 different meanings. The Redox Process making our "ReActed" Products is most certainly Un-Equalled ...Incomparable. Redox has the one & only ISO-9001-Certified Manufacturing Facility in existence. Nobody else has this capability.

\*\*\*\* **No....Dont worry about the Bees** in the **Blues** for your FalGro 2X-LV or Your Splendor Applns. It wont hurt them. Besides, they see you coming and move. The Universities have been recommending these Apps while in Bloom for many many Years. And the Universities and You and Me are all on the Bees side. We must protect our Bees.

\*\*\*\* **I see a lot of "Drums" Go in Out....**

There is **\$significant \$avings\$** when you Guys get your Amine-2,4-D & Indicate & FoliCal & Glyphosate & AvianControl & many Others in 30 Ga.Drums.... Like almost always over \$100 \$avings. Looking at AvianControl ...for Repelling Birds ... Comparing 6 cs 2 x 2.5 ga. to a 30g.Drum, is nearly \$500 difference. Thats just the way the Manufacturers do it.

\*\*\*\***My Prediction-Best-Guess...?????** We'll catch some more **Spores**....with the next real-deal-Wetting Event. And then we will catch 1 or 2 or 3 more Spores with the Rain after that. I thinkn Primary will be done 7-8 Days from now.... Thats when we'll know for sure there's no more Spores left to Discharge.

Gods Peace .....r
