Fruit Ridge Notes - Monday - May 20 - 2019

Greetings Friends

Good Grief that's a Cold Wind !!!

Is it even going to get to 50°F Today !!!!!!!

It tried very hard to Rain earlier today Didn't really get any ...
That Wind is supposed to be way down Tues.AM... but then pretty bad
again Wedn.AM-to-Noon....

.....That's according to WunderGround.

*****Blues Boys** Also ... For **Improved Fruit-Set --**

1st App KelPak - Early Flowering ... 1 Qt-Acre ...2nd App - Petal Fall
And....

Apples---- Anytime Now.... again at Petal Fall.

This is the South African SeaWeed Product you heard about at
Winter Meetings.

***** Fire-Blight -- Reminders**

*On Your fiercest F.Blight Risk Blocks.... During Bloom... Try to stay
ahead of it with spraying every 2-3 Days.

*Ya gotta know if your Inoculum is 'Resistant' to the Streptomycin.

For some of you Guys the Strep still works great... But... a big Fat
Zero for a lot of Others.

Strep has capabilities of 24-Hr-Eradication-Kick-Back, and 3 Days
Protectant.

*If you're in big-time-serious-F.B. trouble, get into your Kasumin.... 2 Qt-
per-100-Ga. Don't use after Petal-Fall.

And... I'm willing to bet you that if you put CS2005 [005] next to it
in a 'Side X Side', You'll get
every bit as good results with it.

*Strep can be Tank-Mixed with Kudos, OxyTet(MycoShield), Regalia,
Perlan, Formula II-SW, K-Phite... EBDC... Teb45DF

*Ya got any Crab-Apple-Pollinators in Your Hi-Dollar Blocks...?? It's
important to keep those covered as long as there's any Bloom....

*Strep has a 12 Hr.-REI.... 50 Da.PHI on Apples.

*The least susceptible--but still susceptible to F.Blight Varieties are
Empires - Macs - Spur Red Dels.

.... Just about every other Variety you're Growing is Susceptible,
with some being fiercely susceptible.

*The SARs are highly recommended by some highly regarded
Researchers... Like Regalia-1 Qt-Ac=\$16 ...and

I like SAver at 2-3 pints wherein I get a Nutrient, and some of those Super"Phite" Inerts... and the Salicylic Acid

[as an Inert] Ingredient=this for \$6 - \$9-Ac. I'd also use a Qt of K-Phite with that....an incredibly effective Bactericide & Fungicide.

*OxyTet[MycoShield is recommended at 1 lb/100 ga. Dont go over 1 Lb-ac. Do go over 5 lb-Ac-Season.

OxyTet is only a Protectant.

*****Sounds Like** the Wayne County N.Y.Guys have had 7 official Scab Infections.

It's been Bad... Some Guys spraying Secondary. Thats UnHolie Molie Ugly.

Have a Great Week
