Fruit Ridge Notes - Saturday - April 25 - 2020

Hey ... Only 8 Months til Christmas

...at Which Time I'm Guessing the Weather will be..?? ... 😞 ...About the Same. 😞

Today--Sunday--Monday are supposed to be hangn round 60°F ...and get us some SunShine...

**** So.... How many Folks Wish they had Ordered the *Kopperts BumbleBees*...??? 😞

You...??? Please check with Deanna **ASAP** ...
Sometimes Kopperts has propagated some Extra-Bumbles ...and might have some

available for certain specific Weeks-Deliveries... ??
... And also... if You Ordered already, but now wish you had ordered more...???

616.887.9933 ... 616.678.7708 ... RGSs Office

Deanna--Nancy--Alicia--The DeeTeam

**** Minecto Pro SC Yup.... Another PreMix-Combo

Made with **Exirel** 10SE and **Abamectin** 0.15EC ...

If you do use the Minecto Full-Recommended-Rate, then you do get the equal amount of the Abamectin A.I. as you do with the Full-20 oz-Ac-Rate Abamectin 0.15EC if going alone.... about 0.023 Lb-AI-Ac...

And... also... If you do MinectoPro Full-Rate 12 oz-Ac. you get all of the Full-Rate-Exirel part of it as well.

So..... Not Bad. The cost is \$40-Acre...?? While Abamectin is \$8.50..??

But I think Exirel by itself is more than \$40.... 😞

I think I pretty much like Minecto Pro... ???

But just to keep myself set-apart from the 'Establishment'...??? I'm also gonna have some Full-Rate PermUp or Warrior in the Tank with it ... for about \$2-Ac.... Like at Petal-Fall.... For those that scorn me for doing Pyrethroids, I point to them dumping Carbaryl/Sevin Insecticide into their Tank for Chem-Thinning... Sevin is worse, or as bad as the worst ...on Bees & Mite+Insect Predators Some of the Puritans actually will use Sevin twice--3 times...

Ya'll remember that the 'Experts' tell us that the "Predator-Populations" are only reduced by 30% - 40% by using Sevin or Butt-Kickn-Pyrethroids... and they ReBuild their Populations rapidly...??

**** **Apple Scab....** At 50°F it takes 19 Hrs of Wet for a "**Moderate**" Infection

but ... we always Take-Notice at the "**Light**" Infection parameter ... which is 14 Hours...

**** **ReVisiting "FungOut"** Indeed ... **TankMixes great with Captan...

**Good Kick-Back-Eradication... **Mildewcide... **Some 'water-conditioner' activity...

We use 1.4%vv... So ... If you do 30 - 40 GWA...Use 2 Qts-Acre... Only \$12.

I seriously dont know why more Guys dont use more FungOut... 😞😞😞 ??

OMRI Listed ...Good Stuff ...

**** 🤪 **Riding Around the Hood** I'd say it's certainly to early for SAver....

That "SA" component is Sooo valuable against FireBlight ...Wait til closer to Bloom ...or any anticipated FB-Threat

**** **Wait ...** Those "BT"Type WormKillers are most strategically employed at Petal-Fall...and Later

And You Folks have been telln me you need to use 2 Lb-Acre DipelDF to get decent efficacy..?? Isnt that like \$28 or More Dollars-Acre...???

So.... That **BioProTect-Plus** from AEF-Global...?? Some of You same Guys tell me it is like those BTs on Steroids!!!!!!

Using 2.5 Pint-Acre = only \$17

....Sounds Like....

...the "'Powers-That-Be"' are gettn their head around a little more Prudent-Common-Sense-Thought-Process... 😞????and maybe the Mr. & Mrs. Consumer--General-Public can start tryin to get back to some semblance of Normal...??? ...Maybe ...Almost ...??? 😞

Hang-In..... Our God Wins.....
